

Technical Training

Beyond The LAN

Course Overview

This one day course introduces the Exterity products and technologies required to extend the traditional IPTV system beyond the wired LAN. Most of the course is in the form of hands-on tutorials, setting up solutions to stream content to mobile devices, thin clients, remote offices, and remote locations via a CDN.

By the end of the course, the participant should have the knowledge and skills to:

- **Configure the AvediaStream t5600 Transcoder and AvediaStream o7500 Origin Server**
- **Set up streams to mobile devices, thin clients, remote offices and CDNs**
- **Set up ArtioPortal to provide a user interface to mobile devices and thin clients**

Course Content

Introduction

This presentation introduces the participant to the Exterity products capable of delivering the Beyond The LAN streaming capabilities, and covers the use cases that can be satisfied using these products. The challenges of streaming Beyond The LAN are discussed, and the technical solutions to these challenges are outlined.

Streaming to Mobile Devices

This session sees the participant use the t5600 Transcoder and o7500 Origin Server to make HLS video streams available to mobile devices (Apple and Android). ArtioPortal is configured to provide a user interface for channel selection on the mobile device. Video on Demand capabilities are also set up.

Streaming to a Remote Office

In this session, the participant will convert a multicast stream at one location to transmit to a second location, where the stream is then re-multicast.

Internet streaming via CDN

In this session, the participant will send a video stream to a CDN, for playback on a device anywhere in the world.

Streaming to Thin Clients

This session sees the participant use the t5600 Transcoder and o7500 Origin Server to make Flash video streams available to thin clients. ArtioPortal is configured to provide a user interface for channel selection on the thin client.
